## Full-Stack Web Developer (Freelance) | 2026

### Contact Management System (Full-Stack Application)

- Designed and developed a fully responsive corporate contact portal utilizing HTML5, CSS3, and JavaScript on the front-end.
- Implemented safe and reliable back-end data processing via Python and Django Framework.
- Integrated database schema using Django Models (SQLite) and enabled administrative full data control via Django Admin Panel.
- Handled asynchronous data transmission without refreshing the page using modern JavaScript Fetch API.

### Temporary Email Service (Web Application Project) | 2026

- Built and structured a temporary email landing page optimized for Google AdSense monetization guidelines.
- Engineered customized article sections and fluid UI grid layouts to enhance user experience and ensure ad visibility.
- Deployed front-end static files efficiently using modern web hosting workflows.
